

EcoPower® Hybrid Ventilation

Originally known as Edmonds® until 2019 then rebranded to Bradford®, a CSR company, in 2020. Bradford is a leading manufacturer of premium ventilation and energy efficiency products including insulation and sarking.

Bradford is passionate about delivering superior comfort and performance whilst reducing the overall impact on the environment. It is this vision of a sustainable future which has resulted in the design and development of many energy efficient innovations. These innovations include natural, wind-driven, hybrid and turbine ventilation technology.

Regarded as a leading industry innovator, Bradford has a range of ventilation products that are engineered and manufactured at its ISO9001 accredited facility in Seven Hills, Australia. It is this manufacturing and technical expertise which makes Bradford a pioneer in home, commercial and industrial ventilation solutions in Australia as well as across the globe.

Bradford, formerly known as Edmonds, has also received numerous awards including the AIRAH Excellence in Sustainability Award in 2013 and Achiever Award in 2008. It was also recognised with a Good Design Award at the 2013 Australian International Design Awards and Master Builders Australia 2012 National Export Award. In 2016 Bradford's EcoPower Hybrid Ventilator won the MEP Services Category in The Big 5 Gaia Awards.

With strong synergies between insulation and ventilation in buildings, Bradford's vision to enable the creation of sustainable environments continues.

EcoPower® was selected by The University of Washington, Molecular Engineering Building to achieve LEED Gold certification.

National Export Award

HVAC Achiever award for EcoPower®

EcoPower®

In a world first, EcoPower® is the only hybrid ventilation unit which incorporates Australian-engineered True-hybrid technology.

Hybrid ventilation is defined as a “two mode (or multi-mode) system that is controlled to minimise energy consumption, while maintaining acceptable indoor air quality and thermal comfort*”. EcoPower® hybrid ventilation will work to ensure a constant supply of fresh air. It combines natural ventilation with a high efficiency electronically commutated (EC) motor in a single unit to ensure reliable and on-demand peak performance, when required.

EcoPower® is capable of operating unhindered in natural mode (wind), or in both natural and energy efficient mechanical modes simultaneously. When required, performance is boosted by activating mechanical operation to ensure desired airflow rates are achieved. Even during mechanical operation, wind power can improve flow rate performance.

EcoPower® installed
at Bradford Seven Hills, NSW, Australia.

EcoPower®

TRUE HYBRID VENTILATION TECHNOLOGY

TRUE-HYBRID OPERATION

- Australian-engineered world's first 'True-Hybrid' patented ventilation technology.
- Combination of natural operation or a combination natural and mechanical ventilation.
- Powered mode operation to meet demand needs for airflow control and performance.
- Passive ventilation for further energy savings when induced by stack effect and wind, passive ventilation when conditions are suitable.
- Improved indoor air quality and occupant comfort.

UNIQUE OPEN THROAT DESIGN

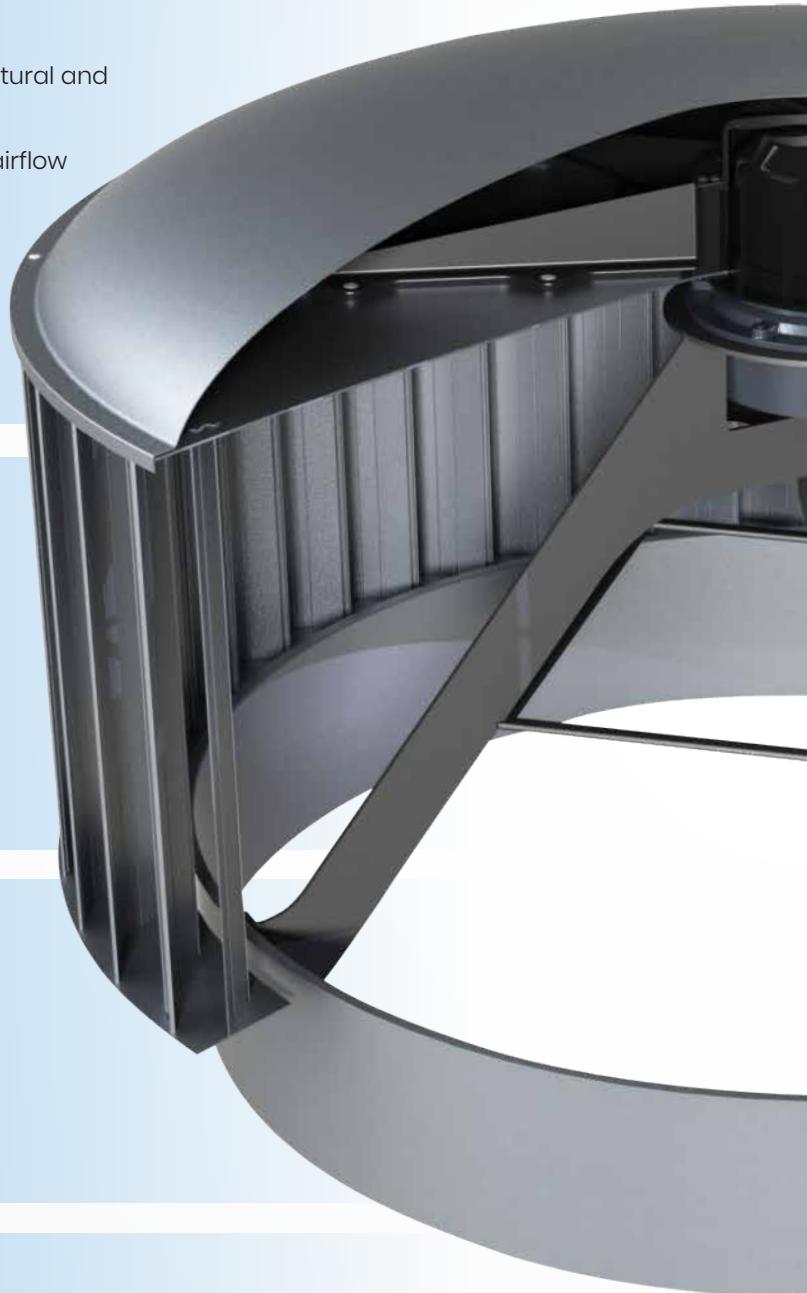

- Eliminated axial fan increases energy efficiency by minimising air friction.
- Improved co-efficient of discharge (C_d), compared to other axial fan assisted vents thus providing better air flow rates.
- Reduced noise versus traditional systems. Only 38dBA @ 3m for EP900.

HIGH PERFORMANCE EDMONDS VERTICAL VANE TECHNOLOGY

- Unique design allows ventilator turbine top to act as the centrifugal impeller.
- Improved co-efficient of flow (C_f), in natural mode compared to traditional spherical vents.

CONTROLS OPTIONS

1. Air iQ enables variable speed operation with either:
 - * Factory pre-set temperature and/or humidity control
 - * Customised temperature and/or humidity control
2. Simple On/off operation
3. External 0-10V input for variable speed operation.
Suitable for BMS control.

EDMONDS AIR iQ

SUITABLE
FOR HIGH
WINDSPEED

HIGH EFFICIENCY ELECTRONIC COMMUTATED (EC) MOTOR

- Advanced engineering for long lasting performance and durability.
- Unique EC Motor configuration for Edmonds Application.
- Large input voltage range 200-277VAC and 50/60Hz.

MATERIALS

- Marine grade equivalent aluminium as standard.
- Options for highly corrosive environments also available.
- Mill finish or powder coated options to match most COLORBOND® colours.

INSTALLATION BENEFITS

- Significant weight advantage (<40kg). Two-person lift may be achieved versus crane-lift for heavier competitor options (90-100kg).
- Lightweight design means additional structural strengthening of roof may not be required.
- Variable pitch throat design can adapt to most roof angles.

SINGLE PHASE

- Ideal for retrofitting existing sites. 3-phase upgrade not required.

NOISE REDUCTION

- Up to 34dB(A) lower than traditional axial fan technology (same capacity).
- Ideal for residential areas, especially during night-time operation.

CONFIGURABLE
PRODUCT

AUSTRALIAN
DESIGN

WARRANTY

- 10 year warranty/2 year warranty for motor.

*Conditions apply. Refer to Warranty Document.

EcoPower®

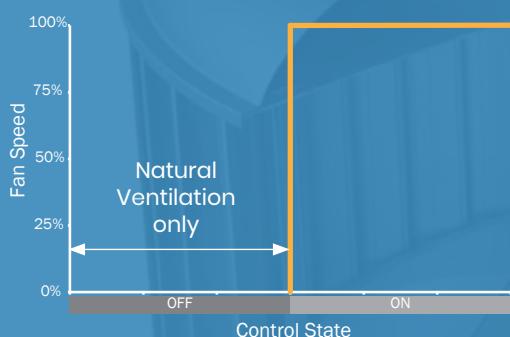

EcoPower® provides flexible control of your application with the ability to integrate into an existing BMS, or use Air iQ for customised temperature and humidity response tailored to your building's needs.

- On/off control wired into a building circuit
- Integrated into a Building Management System (BMS) with a 0-10V interface
- Air iQ controls platform

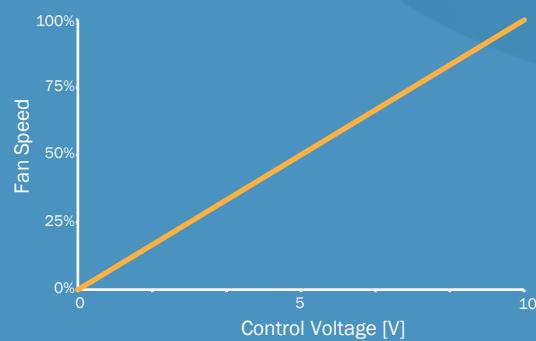

On/Off function where:
On: EcoPower runs in full speed mode
Off: EcoPower runs in Natural mode

Fast Response - Standard

EcoPower can be controlled via a 0-10V input to a Building Management system (BMS) for complete airflow control and visibility.

Fast Response - 0-10V Control

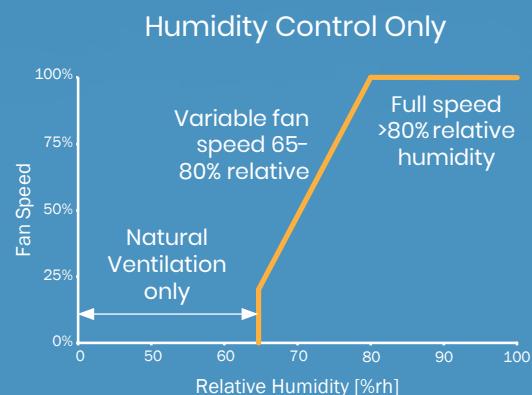

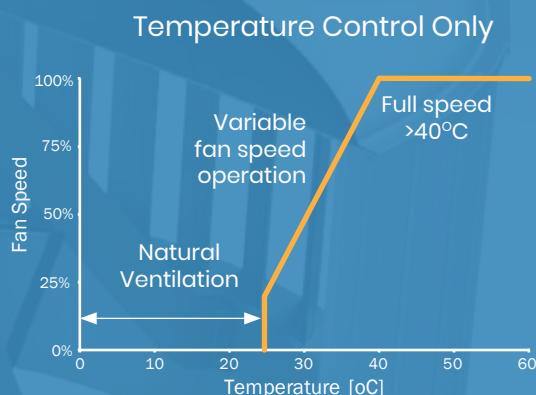

EcoPower® with Air iQ is integrated with in-built temperature and humidity programs for simple and effective airflow control.

Customised options:

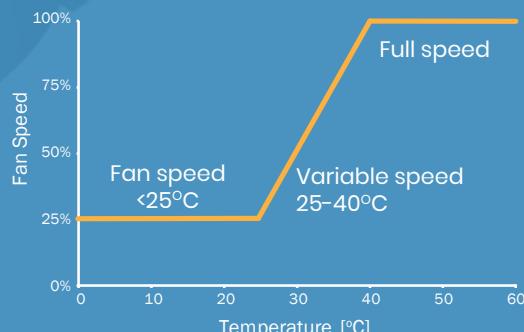

1. Customised temperature only control
2. Customised humidity only control
3. Customised temperature and humidity control

Factory pre-set options:

1. Temperature only control
2. Humidity only control
3. Temperature and humidity control

If the combined solution is chosen, EcoPower will analyse the temperature and humidity conditions and automatically select the profile with the highest fan speed.

This example shows continuous ventilation at temperatures < 25°C with increasing fan speed responding to temperature > 25°C

ENERGY SAVINGS

An EP900 can achieve up to \$13,000* electricity cost savings (up to 86%) over a 10 year period versus National Construction Code of Australia 2012 requirements.

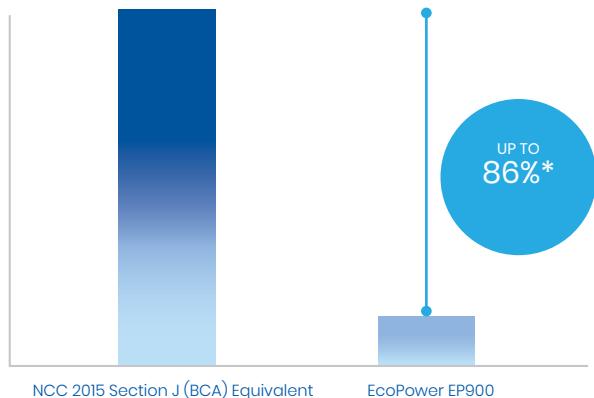

For a system without filters, the NCC 2015 Section J 5.2a, states “when the air flow rate of a mechanical ventilation system is more than 1000 L/s, the system must have a fan power to air flow rate ratio” of 0.65 W/(L/s).

In comparison, EcoPower EP900 have a fan motor power to air flow ratio of 0.0864 W/(L/s). This equates to an energy reduction of 86.7%.

Annual electricity cost calculation for a commercial building installed with 10 ventilators based on:

- 12 hours on and 12 hours off x 365 days
- Flow rate of 2,778 L/s

This translates to a saving of up to \$13,000 per annum (86.7%*) or up to \$130,000 over a 10 year period life when compared to the NCC 2015 BCA Section J requirement.

Technology	Power Usage (kW)	Fan Motor power to air flow ratio W(L/s)	Annual Electricity Cost (\$)
NCC* requirement	1.8	0.65	\$5,694
EcoPower EP900	0.25	0.0864	\$757

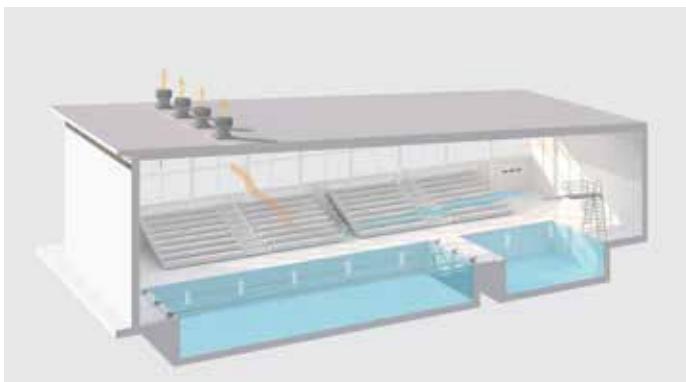

Based on 12 hours on / 12 hours off @ \$0.20 per kWh x 365 days for 10 units
*versus NCC 2015 BCA Section J Requirements

PROJECTS AND APPLICATIONS

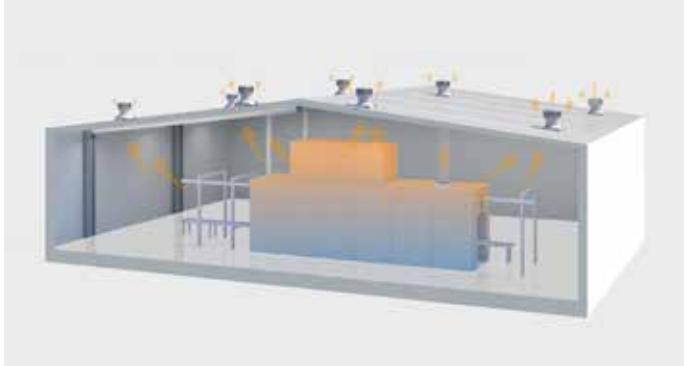

AUDITORIUMS, HALLS AND GYMNASIUMS

Aquatic centre

Large spaces with high occupancy usage load are often accompanied by excess heat build-up. In many cases, natural ventilation is not adequate during times of high usage periods. EcoPower allows demand controlled ventilation to significantly increase the rate of extraction. This delivers better airflow control, improved occupant comfort and reduces the load on air conditioning systems.

INDUSTRIAL, FACTORIES AND WAREHOUSE FACILITIES

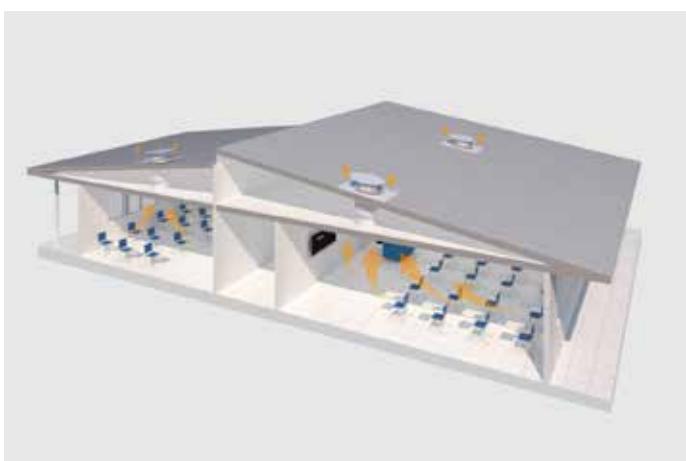

Factory

EcoPower can be configured and programmed to automatically respond to set temperatures and/or humidity using Air iQ control platform or 0-10V inputs to your Building Management System (BMS).

Applications include meat and dairy processing plants, refrigerated warehouses, dry goods storage and data centres.

CLASSROOMS

Classroom

When ducted to the ceiling, EcoPower allows natural ventilation during the day to meet or exceed minimum outdoor air ventilation rates requirements of AS1688.2 and ASHRAE standard 62.1. The powered mode can be activated at night, by a timer or temperature sensor. The night purge operation removes excess heat in the room or building, allowing cool night air to cool the building down. This reduces air conditioning load and lowers energy consumption.

University of Washington

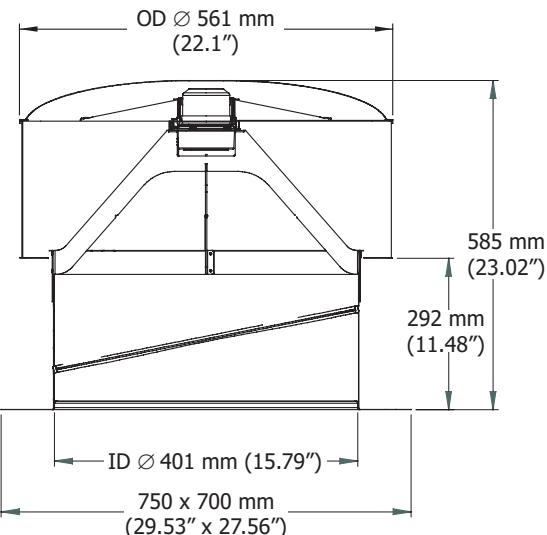

MULTI-STORY BUILDINGS – VENTILATION SHAFTS

When The University of Washington committed to achieving and exceeding the high sustainability rating benchmarks set by LEED Gold, the smart choice for ventilation came down to just one product. EcoPower® from Bradford Ventilation. EcoPower significantly reduced the building's energy footprint without compromising occupant comfort. Other benefits included reducing the area requiring air conditioning by 40%, reducing energy consumption to 180–200W per unit which equated to a 63 – 76% saving. Significant noise reduction was also achieved.

Performance ratings do not include the effects of appurtenances (accessories). Performance certified is for installation type A – Free inlet, Free outlet. Values shown are for inlet LwA sound power levels for Installation Type A: free inlet, free outlet. The A-weighted sound ratings shown have been calculated per AMCA International Standard 301. The sound ratings shown are loudness values in fan sones at 1.5 m (5 ft) in a hemispherical free field calculated per AMCA International Standard 301. Values shown are for Installation Type A: free inlet hemispherical sone levels.

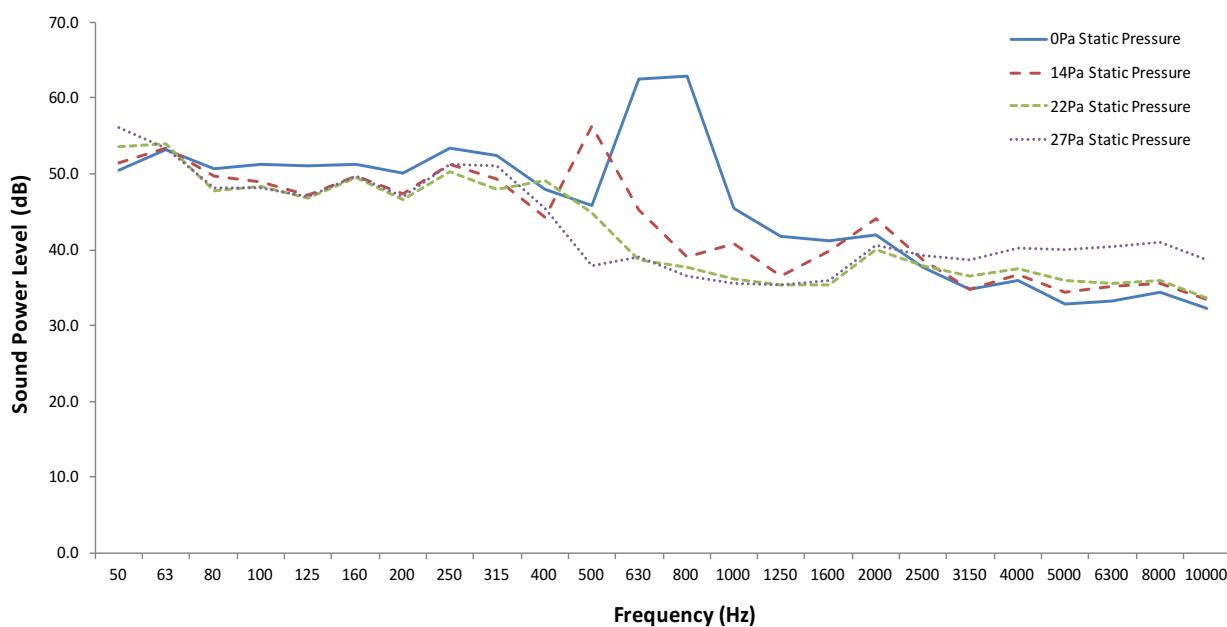

CSR Building Products Ltd T/A CSR Bradford certifies that the EcoPower hybrid ventilators shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and AMCA Publication 311 and company with the requirements of AMCA Certified Ratings Program.

TESTED CHARACTERISTIC CURVES – POWERED AND NATURAL

Airflow rates are tested in accordance with ISO5801, equivalent to AMCA Standard 210. Natural performance and wind assisted data is tested as per ISO5801 with an external wind source providing a constant source of wind across the specimen. Wind assisted tests performed by Edmonds on Edmonds in house test equipment. Wind assisted performance testing is outside the scope of AMCA's test standards.

TESTED SOUND PRESSURE LEVEL : ONE – THIRD OCTAVE

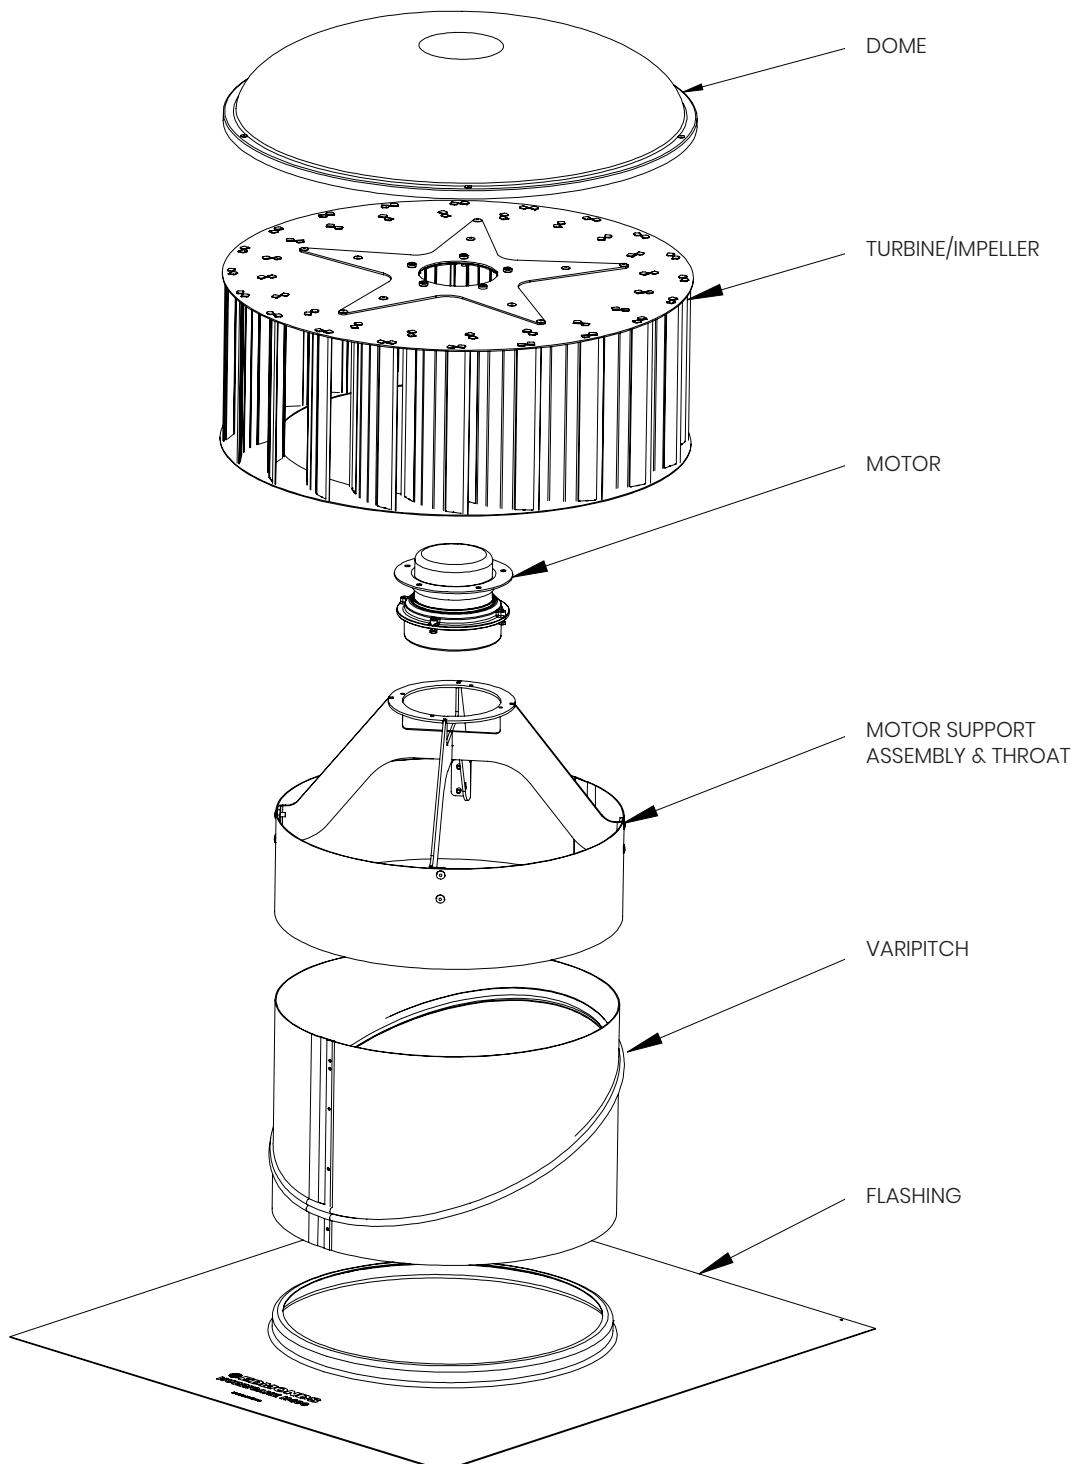

Testing was conducted by AMCA. Performance certified is for installation type A – Free inlet, Free outlet. Rating method E (Direct Drive, As Run Speed, Low Slip Motor). Values shown are for sound inlet LWI power levels for: Installation Type A: free inlet, free outlet. The sound power level ratings shown are in decibels, referred to 10-12 watts, calculated per AMCA International Standard 301. The A-weighted sound ratings shown have been calculated per AMCA International Standard 301. Performance ratings do not include the effects of appurtenances (accessories).

CSR Building Products Ltd T/A CSR Bradford certifies that the EcoPower hybrid ventilators shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and AMCA Publication 311 and company with the requirements of AMCA Certified Ratings Program.

EXPLODED VIEW

DESIGN SPECIFICATIONS

PERFORMANCE

Roof mounted ventilator shall be EP400. Ventilator air flow performance shall be tested in accordance with ISO5801, equivalent to ANSI / AMCA standard 210-07, figure 15 setup, installation type A. Fan sound performance shall be tested and stated in accordance to AMCA standard 300-08, figure 2 setup, installation type A. Noise must be less than or equal to 53dB(A) @1.5m with max power consumption at 60W or better.

OPEN THROAT

The hybrid ventilator shall incorporate an open throat design. This design improves air flow rates by eliminating the need for a separate axial fan.

DRIVE ASSEMBLY

The ventilator shall use a direct drive centrifugal design where the bearing system of the motor functions as the bearing system of the ventilator. This means the vent can be free spinning under wind load and/or power activated as conditions require.

MOTOR

The hybrid ventilator shall use a high efficiency single phase Electronic Commutation (EC) motor.

CONSTRUCTION

Ventilator shall be constructed with high quality engineering materials:

- Dome, turbine and throat shall be made of aluminium.
- The brackets shall be powder coated or polyolefin mild steel.
- Support arms and motor housing shall be glass reinforced Nylon 6.
- Available in a range of colours upon request.

CONTROLS

The hybrid ventilator shall be controlled by either:

1. On/off switch control, or
2. Air iQ with factory pre-set temperature control, or
3. Air iQ with factory pre-set humidity control, or
4. Air iQ with factory pre-set temperature and humidity control, or
5. Air iQ with factory customised temperature and humidity control, or
6. 0-10V operation with BMS control

ACCESSORIES

When specified, accessories such as manual damper, electric damper, EC damper grilles, and special bases (spigot, square to round and ex base) are available upon request.

WARRANTY

CSR Building Products Limited ABN 55 008 631 356 T/A Bradford Ventilation (“Bradford”) warrants from the date of purchase, for a period of TWO (2) YEARS that the Electronic Commutating Motor and for a period of TEN (10) YEARS that the Turbine Body of the Bradford EcoPower® Hybrid Ventilator will retain its performance characteristics and be free from faulty materials and workmanship on the condition that the vent is installed in accordance to the installation instructions. Please refer to Warranty Document on bradforcventilation.com.au for full details.

FOR HIGH
WINDSPEED

WATER INGRESS
PROTECTED

CONFIGURABLE
PRODUCT

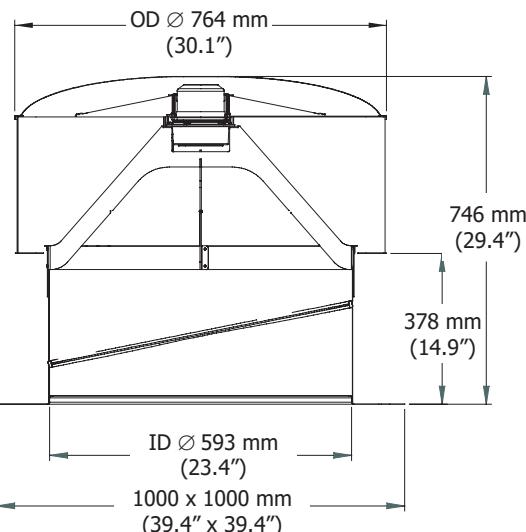

AUSTRALIAN
DESIGN

Model	EP400^	EP600^	EP900^
Power Source	Hybrid - Wind and electrical		
Dimensions on varipitch*			
Height Overall (mm)	574	734	962
Diameter Turbine (mm)	561	766	1093
Flashing Length (mm)	750	1000	1200
Flashing Width (mm)	700	1000	1200
Throat diameter (mm) @ min cross section	401	592	891
Mass*(kg)	9.4	18.2	36
Material			
Turbine Top	Aluminium		
Varipitch	Aluminium 5005		
Flashing	Aluminium 5005		
Finish	Mill / Powdercoat		
Roof slope range - varipitch	0-45°	0-45°	0-22.5°
Sound			
Sound power level (LwA) ΔP=0	65	54	54
Sound Pressure Level @ 3m distance & ΔP=0 (dB(A))	47	36	36
Electrical			
Phase	Single	Single	Single
Motor	Electronic Commutating (EC)		
Input Voltage	200-277 VAC	200-277 VAC	200-277 VAC
Input Voltage (Hz)	50/60	50/60	50/60
Max. running current draw (A)	0.28	0.47	1.21
Max. running power consumption (W)	60	99	212
Flow rate at ΔP=0			
m ³ /hr	2448	4356	10321
m ³ /s	0.68	1.21	2.87
l/hr	2448000	4356000	10321000
l/s	680	1210	2867
Accessories			
Electric Dampers	•	•	•
Temperature Variable Speed Control	•	•	•
Thermostat	•	•	•
Humidistat	•	•	•
0-10V variable speed control	•	•	•
Special bases - spigot slope	•	•	•
Special bases - spigot ridge	•	•	•
Special bases - square to round slope	•	•	•
Special bases - square to round ridge	•	•	•
Special bases - spigot curb mount	•	•	•
Special bases - square to round pyramid	•	•	•
Special bases - spigot pyramid	•	•	•
Special bases - EX base	•	•	•
Sparkguard	•	•	•
Australian designed and built	•	•	•
Manufactured in ISO 9001 facility	•	•	•
