#### DESCRIPTION OF BUILDING PRODUCT

The Mammoth Acoustic Panel Absorber is manufactured in NZ from thermally bonded polyester fibres which are extracted from recycled plastic bottles.

The panel is intended for use as a fully finished exposed building element that reduces noise reverberation as given by a Noise Reduction Coefficient (NRC). The panels may also contribute to acoustic performance when incorporated in an internal or external wall, or mid-floor specification, and the acoustic performance is calculated using the Mammoth acoustic performance software or specifically designed by an acoustic engineer.

All panels provide some thermal efficiency performance. Some of the panels have been tested to NZS 4859.1 and Mammoth has stated an R-value.

Depending on the manufacturing process, the appearance of the panel can be mottled or uniform.

**Polyester insulation products are resistant to moisture.** Whilst performance may reduce when wet, once the material has dried out, the insulation and noise reduction performance characteristics are regained.

Mammoth Acoustic Panel Absorber (excluding Panel Absorber 40/100) achieves a material group number IS when tested by **BRANZ** to ISO 9705.

For a complete list of products and characteristics refer to **Mammoth**.
