	100	40	40	25	100	0538000601003

Step 1: Drill the boards and substructure with a SPAX Step Drill. Use the complete length of the drill at the highest possible speed (around 3,000 rpm).

Step 2: Drive the decking screw straight in with a T-STAR plus T25 BIT without stopping until the head is flush.

Result: Impeccable visual appearance with minimal splitting. Long lasting connection with minimum movement due to fixing thread.
